## Expert Claims Pilot May Have Deliberately Crashed Air India Flight

Captain Mohan Ranganathan, one of India's leading aviation experts, has pointed to the sequence of fuel cutoff switches and cockpit audio to suggest that the crash may have stemmed from deliberate actions.

When NDTV asked if one of the pilots intentionally switched off the fuel, fully aware that doing so could cause a crash, Captain Ranganathan said, "Absolutely."

"I've heard that the captain had some medical history. Nothing else explains why, at the takeoff point, just as rotation starts, both switches are moved one after the other to the 'off' position. It has to be deliberately done. According to the cockpit voice
